Stubble burning is a practise of burning the leftovers in a field after harvesting. Stubble burning has Contributed 25% of pollution faced by NRC and based on season it may go Contribute to even 50%.

Reasons for burning Stubble

- The Short window between harvesting paddy & Sowing seeds for Rabi season.
- The traditional practise down the lane for ages
- Lack of moderntechnology & labour
- Improves soil fertility and also kills the rodents which inhabitate the farm
- Lack of financial support
- Lack of Stringent & Strick implementation of ~~for~~ action by PPCB & HSPCB.

Alternatives:

- Educating the public to raise awarness
- Bringing modern machines to implementation
- Intensifying the labour through the help of SHG & NGO's.
- Promoting the use of Drones to put a vigilance over the fields

- Bringing Cattle into the fields to eat away the left overs = Sustainable ~~for~~ practise

- Regular inspections by PCB and also incentivising the farmers for bringing the stubble to mandi's

  - For farmers
    - increasing income ~~[illegible]~~
    - boosting them to follow the policy
  - Gathering stubble can used ~~to~~ for biofuels

- Using the data obtained to pre point the location of next practising area

Stubble burning has at a point of time has been a problem for many power houses like USA, britan, China. India hence has to follows the same path as the Consequences if not are very harsh on ~~the~~ NRC.
